Let's see a problem

Let's see a problem

Sort the array of numbers.

Let's see a problem

Sort the array of numbers.

29	25	3	49	9	37	21	43

Possible Solution

What could be our approach to solve this problem?

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

- Insertion Sort

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

- Insertion Sort
- Bubble Sort

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

- Insertion Sort
- Bubble Sort
- Merge Sort

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

- Insertion Sort
- Bubble Sort
- Merge Sort
- Quick Sort

Possible Solution

What could be our approach to solve this problem?
We can use some commonly used algorithms. Like:

- Insertion Sort
- Bubble Sort
- Merge Sort
- Quick Sort
- etc.

But wait!!!

But wait!!!

All those algorithms take at least $n\lg(n)$ time to sort the array.

But wait!!!

All those algorithms take at least $n\lg(n)$ time to sort the array.

Can we sort in linear time?

But wait!!!

All those algorithms take at least $nlg(n)$ time to sort the array.

Can we sort in linear time?

Yes, we can :)

BUCKET SORT!!!

Bucket sorting is a linear time algoritm of sorting

BUCKET SORT!!!

Bucket sorting is a linear time algoritm of sorting

Assumptions:

Assumptions:

- inputs are in a small range.

Assumptions:

- inputs are in a small range.
- inputs are distributed uniformly over the range.

Back to our problem.
